FACE, NECK & DECOLLETE

ClearLift

ClearLift by Alma uses advanced laser technology to stimulate the production of new elastic fibers and supportive elements within the skin. This slows the natural and environmental aging processes. This laser targets a variety of age-related skin imperfections such as wrinkles, fine lines, sun damage, uneven skin tone, and skin laxity.

300-400

Dye VL

Dye VL by Alma is a non-ablative laser which combines two trusted technologies, Pulsed Dye Laser and Intense Pulsed Light (IPL), to treat a variety of skin conditions including vascular and pigmented lesions, port-wine stains, rosacea, and hyperpigmentation.

200-350

Erbium YAG

ER YAG by Alma is a highly effective ablative skin resurfacing laser also known as a fractional laser. This treatment minimizes acne, acne scarring, fine lines, wrinkles, and sun damage while improving skin texture, elasticity, and tone.

325-450

FACE & BODY

Laser Hair Removal

Alma (SHR) laser hair removal works to impair targeted hair follicles by gently heating them with pulsed energy, resulting in permanent hair reduction. This is one of the most comfortable and effective hair removal lasers on the market.

150-400

Tattoo Removal

Alma Q-Switched Nd:YAG is a high powered laser providing successful multi-color tattoo removal. This works by vibrating and breaking down ink particles in the tattoo. As the area heals, the body's immune system flushes away the particles causing the tattoo to fade.

250-550

BODY

TruSculpt iD

TruSculpt ID body contouring treats the chin and various areas of the body. The iD delivers radiofrequency energy to the entire fat layer from skin to muscle, while maintaining a comfortable skin temperature. The therapeutic heat irreversibly damages up to 24% of targeted fat cells. Over a 12-week period, the damaged fat cells are slowly broken down and eliminated by the body.

1,500-2,250
